HAKKIMIZDA

Otomotiv yedek para endüstri alanında KRANK KASNAKLARI önemli bir yer tutmaktadır. Bu grup yedek paralarda oluşabilecek en küçük hatalar bile maddi ve manevi büyük hasarlara neden olmaktadır. Bu itibarla uzun süredir yapmakta olduğumuz Otomotiv Yedek Para ticaretini imalata dönüştürüp, bu alan da müşterilere daha iyi hizmet ve daha kaliteli ürün vermeyi amaç edindik.

Bu amaç ile 2007 yılında firmamıza ait 1500 m2 binamıza taşınıp, modern tesislerde Krank Kasnağı imalatına başladık. Üretim standartlarımızı yükseltmenin gururu içinde müşterilerimize en yüksek kaliteyi en uygun fiyata vermek amacındayız.

K-metal, müşteri istek ve beklentilerini ön planda tutarak kaliteli, dinamik, güvenilir mamuller üretmeyi; sürekli iyileştirme politikası bağlamında hem kendisinin hem de müşterilerinin pazar payını ve rekabet gücünü arttırmayı; ve alanında lider bir kuruluş olmayı taahhüt eder.

ABOUT US

CRANKSHAFT PULLEYS in the field of automotive spare parts industry plays an important role. This group resulting from spare parts, even the smallest mistakes cause big damages the material and spiritual. In this regard we have done for a long time to convert Automotive Spare Parts trade to production, and better customer service in this area aim to provide high quality products.

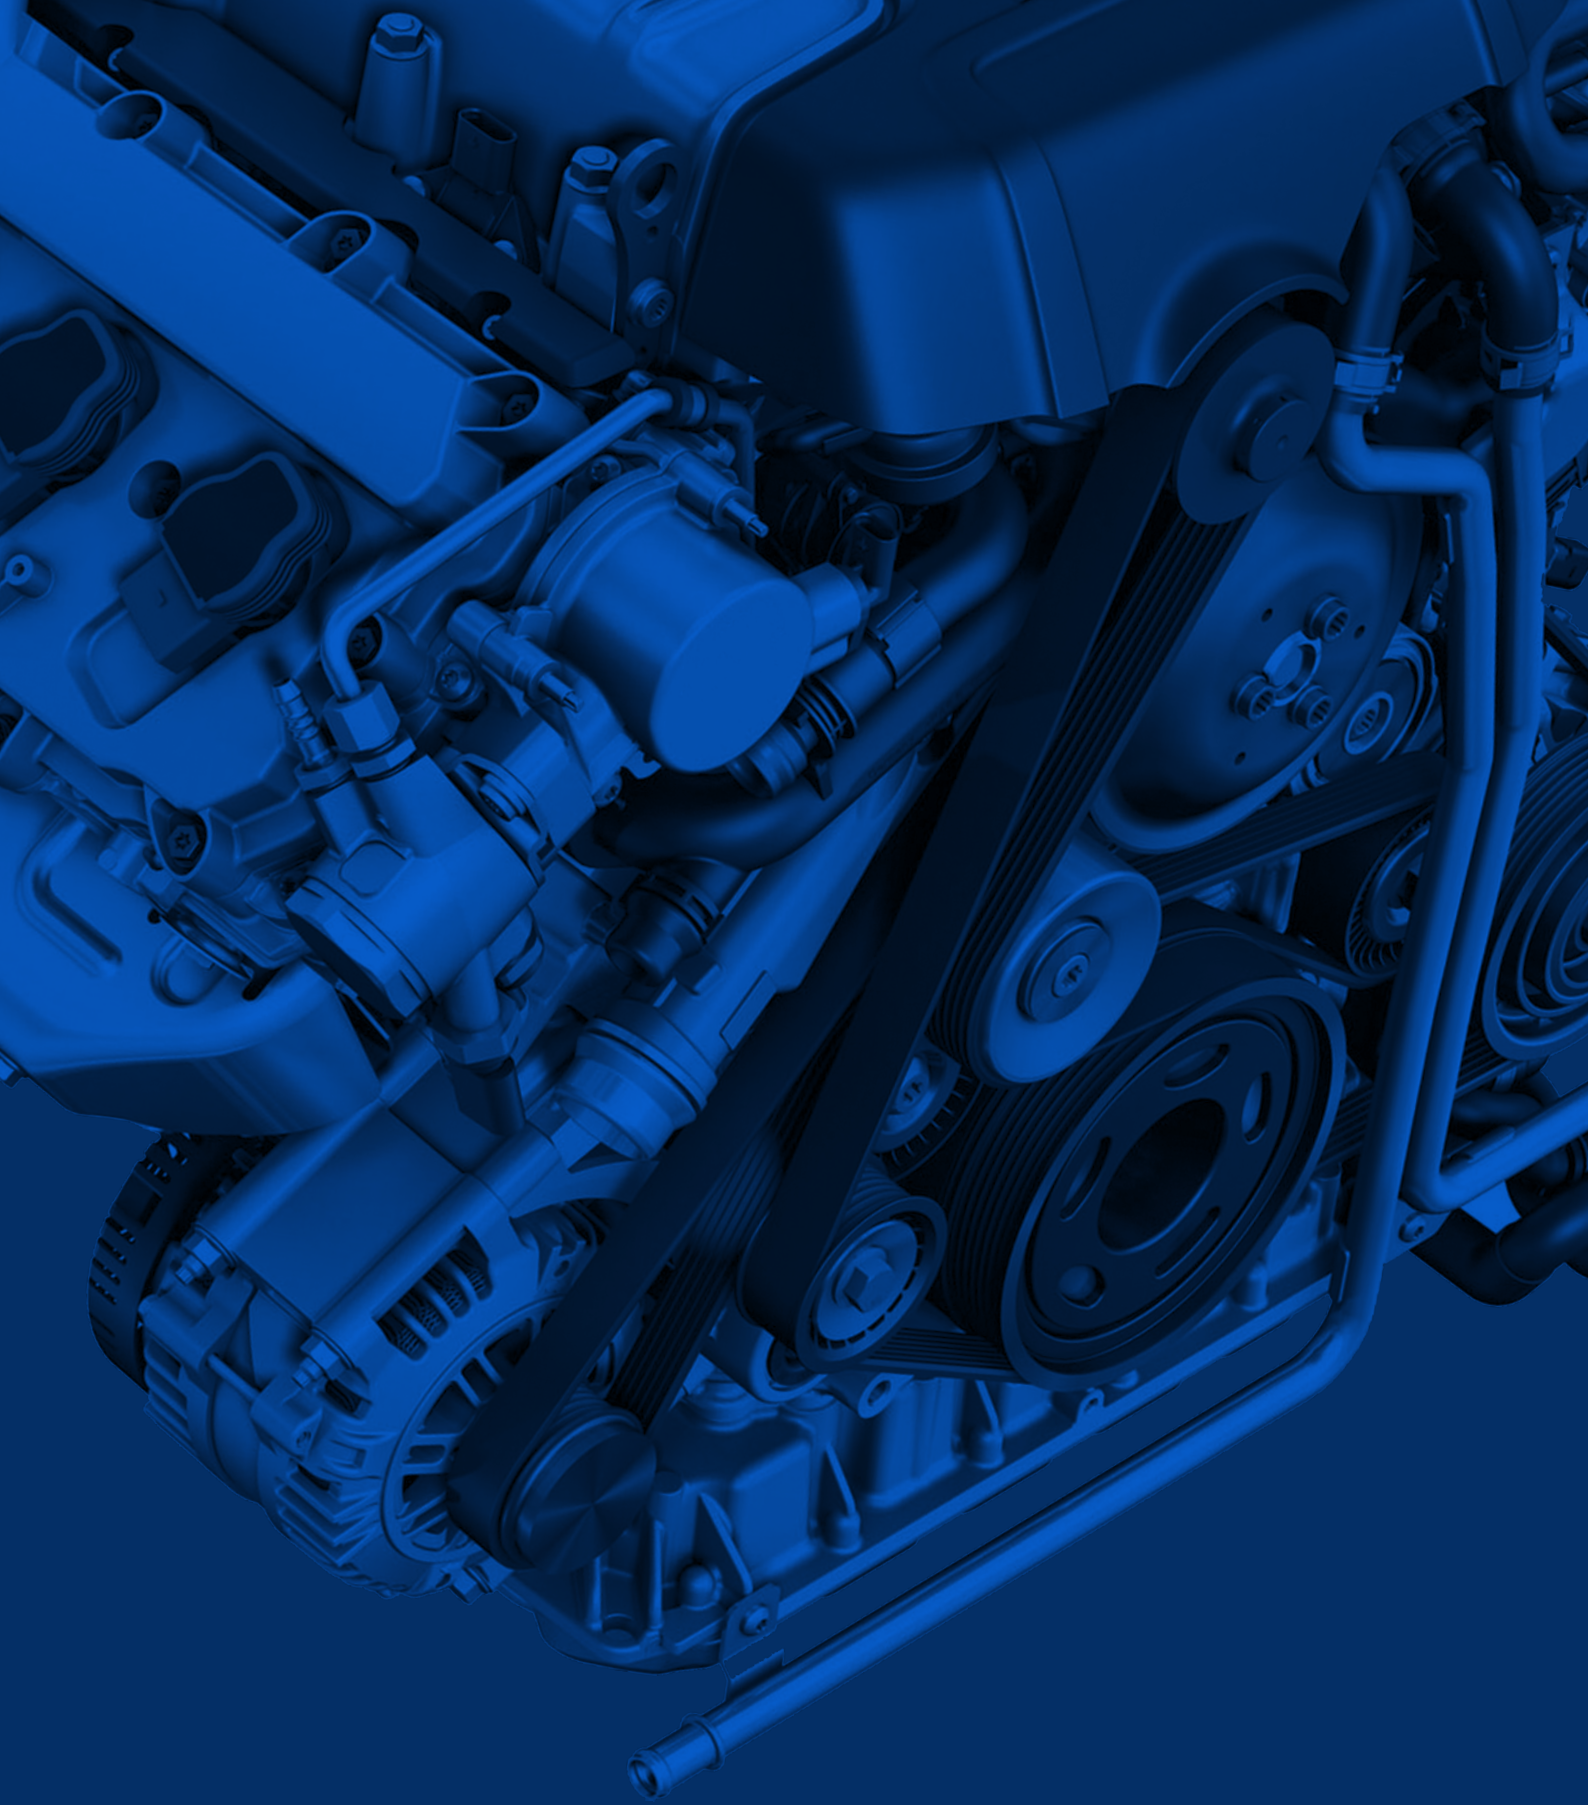

With this purpose in 2007, our company moved to our 1500m² building, started to produce the crankshaft pulley in modern plants. Pride in raising standards of manufacturing; the highest quality to our customers we intend to give you the most affordable price.

K-metal gives priority to high-quality, dynamic, reliable products to produce by referencing customer needs and expectations, in the context of policy of continuous improvement, both the company and the competitiveness of its customers and increase market share, and is committed to being a leading organization in the field.

ÜRETİM / PRODUCTION

en dinamik hareket için...

CRANKSHAFT PULLEY

A harmonic balancer (also called crank pulley damper, crankshaft damper, torsional damper, or vibration damper) is a device connected to the crankshaft of an engine to reduce torsional vibration and serves as a pulley for drive belts.

Every time the cylinders fire, torque is imparted to the crankshaft. The crankshaft deflects under this torque, which sets up vibrations when the torque is released. At certain engine speeds the torques imparted by the cylinders are in synch with the vibrations in the crankshaft, which results in a phenomenon called resonance. This resonance causes stress beyond what the crankshaft can withstand, resulting in crankshaft failure.

These vibrations from the engine can become too much for the crankshaft to bear, causing it to fail. And when that happens, your car won't run and you'll be facing some expensive repairs.

To prevent this vibration, a harmonic balancer (crankshaft pulley) is attached to the front part of the crankshaft. The damper is composed of two elements: a mass and an energy dissipating element. The mass resists the acceleration of the vibration and the energy dissipating (rubber/clutch/fluid) element absorbs the vibrations.

In essence, the device (crankshaft pulley) is designed to help prevent crankshaft failure. If you don't want to have trouble caused crankshaft failure, you should make the right crankshaft pulley choice.

Important !!!

Pulleys should be checked every 90,000 km and replaced together with the bolts and belts.

en dinamik hareket için...

KRANK KASNAĞI

Harmonik dengeleyici (krank kasnağı, titreşim amortisörü, burulma amortisörü de denir) motordaki burulma titreşimini azaltan ve kayışlar için kasnak görevi gören, krank miline bağlı bir parçadır.

Silindirlerin her ateşlemesinde tork krank miline aktarılır. Açığa çıkan tork, yarattığı titreşimlerle krank milini döndürür. Belirli motor devirlerinde silindirler tarafından üretilen torklar krank milindeki titreşimlerle senkronizasyon halindedir, bunun sonucunda rezonans meydana gelir. Krank milinin dayanabileceğinin ötesinde gerilim yaratan rezonans krank milinin arızalanmasına neden olur.

Motordan gelen bu titreşimler krank milinin dayanamayacağı kadar çok olabilir ve arızalanmasına neden olur. Böyle bir durum meydana geldiğinde aracınız hareket etmeyecektir ve bazı pahalı tamiratlarla karşılaşabilirsiniz.

Bu titreşimden korunmak için, bir harmonik dengeleyici (krank kasnağı) krank milinin ön yüzüne takılır. Bu parça iki unsurun bir araya gelmesinden oluşur: parça kütlesi ve enerji yutucu bir eleman. Parça kütlesi artan titreşim yoğunluğuna dayanırken enerji yutucu eleman (kauçuk/burç/sıvı) titreşimi absorbe eder.

Özünde, bu parça (krank kasnağı) krank milinin arızalanmasını önlemeye yardımcı olması için tasarlanmıştır. Eğer siz de krank milinizin arızalanmasıyla ilgili bir sıkıntı yaşamak istemiyorsanız, doğru krank kasnağı seçimi yapmalısınız.

Önemli !!!

Kasnaklar her 90.000 km de bir kontrol edilmeli, civata ve kayışlarla beraber değiştirilmelidir.
